PUBLICATION OF THE PATENT OFFICE

INTRODUCTION

In view of the recent amendment made in the Patents Act, 1970 by the Patents (Amendment) Act, 2005 effective from 01st January 2005, the Official Journal of The Patent Office is required to be published under the Statute. This Journal is being published on weekly basis on every Friday covering the various proceedings on Patents as required according to the provision of Section 145 of the Patents Act 1970. All the enquiries on this Official Journal and other information as required by the public should be addressed to the Controller General of Patents, Designs & Trade Marks. Suggestions and comments are requested from all quarters so that the content can be enriched.

(PROF. (DR) UNNAT P. PANDIT)
CONTROLLER GENERAL OF PATENTS, DESIGNS & TRADE MARKS

Filing Date	:NA	

(57) Abstract :

This invention is a smart system for ambulances that does two vital jobs at once: monitoring the patient and clearing traffic. The health part uses sensors (for ECG, oxygen, blood pressure, and stress) connected to a microcontroller (like Arduino Mega) to collect vital signs. It cleans up the signals, packages the data, and sends it via Wi-Fi to a hospital cloud page for doctors to see in real-time. At the same time, the traffic part uses a separate microcontroller (like Arduino Nano) with GPS. When the ambulance gets near a traffic light, it calculates the distance and automatically sends a radio command (using an nRF24L01+ chip) to that junction. A receiver box at the light gets the command, checks it, and safely overrides the normal lights to turn green for the ambulance, creating a clear path. Both parts work independently off the ambulance's 12V power, cutting down both diagnosis time and travel time to save lives.
