PUBLICATION OF THE PATENT OFFICE

INTRODUCTION

In view of the recent amendment made in the Patents Act, 1970 by the Patents (Amendment) Act, 2005 effective from 01st January 2005, the Official Journal of The Patent Office is required to be published under the Statute. This Journal is being published on weekly basis on every Friday covering the various proceedings on Patents as required according to the provision of Section 145 of the Patents Act 1970. All the enquiries on this Official Journal and other information as required by the public should be addressed to the Controller General of Patents, Designs & Trade Marks. Suggestions and comments are requested from all quarters so that the content can be enriched.

(PROF. (DR) UNNAT P. PANDIT)
CONTROLLER GENERAL OF PATENTS, DESIGNS & TRADE MARKS

(61) Patent of Addition to Application Number	:NA	
Filing Date	:NA	
(62) Divisional to Application Number	:NA	
Filing Date	:NA	

(57) Abstract :

Healthcare systems require continuous patient monitoring, rapid emergency response, and efficient management inside Intensive Care Units (ICU). Traditional monitoring methods often depend on manual observation, which can delay detection of critical health conditions. To overcome these limitations, this project proposes a Smart ICU Monitoring and Autonomous Emergency Response System using IoT. The system is designed to monitor multiple ICU beds in real time using advanced biomedical and environmental sensors. Each patient unit is equipped with sensors such as heart rate, ECG, SpO2, blood pressure, respiration, temperature, glucose, body movement, and bed occupancy sensors. These sensors continuously collect patient health data and send it to an ESP32-based controller. The data is transmitted wirelessly through NRF24L01, LORA, WiFi, or 5G communication modules to a central ICU gateway and cloud server. An Artificial Intelligence engine analyzes the incoming data to detect abnormalities, predict emergencies, and generate smart alerts before critical conditions occur. In case of danger, alerts are instantly sent to nurses, doctors, and family members through mobile applications, SMS, calls, and dashboard notifications. The system also supports voice nurse calls, robot assistant integration, automatic oxygen control, smart bed adjustment, and digital twin ICU monitoring for future hospital automation. The proposed project improves patient safety, reduces nurse workload, enables faster medical response, and enhances healthcare efficiency. It provides secure cloud data storage, historical health reports, and remote monitoring features. This smart ICU solution represents an advanced combination of IoT, AI, Cloud Computing, Robotics, and Healthcare Automation, making it highly useful for modern hospitals and future smart healthcare systems.
