PUBLICATION OF THE PATENT OFFICE

INTRODUCTION

In view of the recent amendment made in the Patents Act, 1970 by the Patents (Amendment) Act, 2005 effective from 01st January 2005, the Official Journal of The Patent Office is required to be published under the Statute. This Journal is being published on weekly basis on every Friday covering the various proceedings on Patents as required according to the provision of Section 145 of the Patents Act 1970. All the enquiries on this Official Journal and other information as required by the public should be addressed to the Controller General of Patents, Designs & Trade Marks. Suggestions and comments are requested from all quarters so that the content can be enriched.

(PROF. (DR) UNNAT P. PANDIT)
CONTROLLER GENERAL OF PATENTS, DESIGNS & TRADE MARKS

Filing Date	:NA	

(57) Abstract :

This invention provides a system and method for early detection of wildfires in remote forests. The system uses a network of self-sufficient solar-powered sensor nodes placed throughout the forest. Each node contains multiple sensors including a flame sensor, a smoke sensor, and a temperature and humidity sensor connected to a microcontroller. This microcontroller runs logic that cross-checks readings from all sensors before confirming a fire, which prevents false alarms. At the same time, every node has a long-range LoRa radio set up for peer-to-peer communication. When a fire is detected, the node broadcasts an alert. Neighbouring nodes automatically receive this alert and pass it along, creating a relay chain that carries the message through the forest without needing any towers or cables. This message eventually reaches a receiver station at the forest edge, which forwards it over the internet to a cloud server. The server then immediately notifies authorities through a mobile application and a web dashboard. The key innovation is the integration of accurate multi-sensor fire detection with a self-organizing wireless mesh network all packaged into a single low-cost solar-powered unit.
